EDUCATION

Linköping University | Computer Science Aug 2025 – Jun 2027 (expected)
Master's degree in Computer Science, 120 ECTS, specialization in AI and Machine Learning
Key courses: Deep Learning, Artificial Intelligence, Machine Learning, Natural Language Processing, AI Robotics, Big Data Analytics, Distributed Systems, Software Engineering

Halmstad University | Applied Artificial Intelligence Aug 2022 – Jun 2025
Bachelor's degree in Data Science, 180 ECTS
Thesis: Improving Rare Disease Prediction with Specialized Loss Functions (15 ECTS)

- Raised F1 on rare MIMIC-III diagnoses from 0.136 to 0.220 with Asymmetric Loss in PyTorch.
- Scholarships: Getinge Sterilization (20,000 SEK), Sparbanksstiftelsen Kronan (25,000 SEK).

EXPERIENCE

Software Engineer | Rögle BK Remote, part-time | Sep 2026 – Present

- Building the club's data platform (Python, FastAPI, Postgres, DuckDB), with tracking data from SHL and HockeyAllsvenskan games and player careers.
- Built a nightly pipeline that stores every raw API response and rebuilds the database from that archive, and linked players across two data providers.

AI Engineering Intern | Ida Infront AB Linköping | Jun 2026 – Aug 2026

- Built a multi-agent LangGraph system in a team of two, integrated into the company's product, where users upload business documents, chat and receive a verified configuration package.
- Made the output reliable by having the agents write a validated specification that rule-based templates turn into XML, instead of letting the LLM write the XML directly.

Data Science Intern | Färjestad BK Remote, part-time | Jul 2025 – Mar 2026

- Built an expected-goals model on 1.5 million shots that outperformed the data provider's model, using engineered features for shot location, shot type, game state and the preceding play.
- Compared logistic regression and gradient-boosted models by testing feature groups one at a time, and removed event flags that leaked the shot outcome.
- Built an hourly Azure pipeline (Functions, SQL Database) feeding ticket-sales data to Power BI.

Warehouse Associate | Nowaste Logistics Helsingborg | Aug 2016 – Aug 2021

- Moved from order picking to shared responsibility for goods receiving at Trademax's warehouse.

PROJECTS

- **CLIP for satellite images (Deep Learning):** Fine-tuned CLIP ViT-B/32 in PyTorch and placed first on the course leaderboard for zero-shot classification.
- **CBT chatbot with RAG (NLP):** Built a GPT-5 chatbot with FAISS retrieval and compared four setups with an LLM judge on seven metrics, checked against human ratings from a Streamlit app.

SKILLS

Programming: Python (NumPy, pandas), SQL; coursework in R and C/C++
Machine learning: PyTorch, scikit-learn, XGBoost
LLMs and agents: LangChain, LangGraph, RAG, Hugging Face, OpenAI and Anthropic APIs
Data and cloud: Postgres, Microsoft Azure, Google Cloud Platform, Power BI
Engineering: Docker, Git, GitHub Actions, Linux, FastAPI, Pydantic, pytest
Languages: Swedish (native), English (fluent)
